ABSTRACT The Technology Platform – Interoperability of Railway Infrastructure applied in 2023 to the call of the OP TAK MPO program with the DIGRI project – Digital and Green Railway Infrastructure. The main objective of the project is to demonstrate the application of digital and green transformation on the railway, especially within the railway infrastructure. Several technological intentions were selected as part of the DIGRI project, in which the digital and green transformation on the railway is presented. The project was launched on 13.4.2023 and the completion date was set for 12.4.2026. The key output document of the project is the “Action Plan for Digital and Green Transformation”.
